# T-LIFT™

Transforaminal Lumbar Interbody Fusion Technology

## Lumbar IBF System

### Features and Benefits

- Bulleted for ease of insertion
- Large central cavity for bone graft
- Secure and robust inserter
- Contouring to aid in prevention of implant expulsion
- Radiographic Tantalum markers to aid in fluoroscopic placement
- Available in lordotic and straight configurations

INDICATIONS: The SpineFrontier Lumbar Interbody Fusion Device System (Dorado IBC, Dorado PLIFT, Dorado ELIFT, Dorado ALIFT, Dorado TILT, Dorado TLIFT, Dorado Wide, and Ursa S-LIFT) is intended for intervertebral body fusion of the spine of skeletally mature patients, using autogenous bone graft to facilitate fusion. The device is indicated for use in patients with degenerative disc disease (DDD) at one or two contiguous spinal levels from L2-S1. These DDD patients may also have up to Grade I spondylolisthesis or retrolithesis at the involved level(s). Degenerative disc disease is defined as discogenic back pain with degeneration of the disc confirmed by history or radiographic studies. These patients should be skeletally mature and have had six months of non-operative treatment. The SpineFrontier Lumbar Intervertebral Body Fusion Device System is intended to be used with supplemental spinal fixation system(s) cleared for use in the lumbar spine.
